# Insights & Recommendations

## Key Findings:

 **Total Admissions:** 1,787 patients admitted during the study period.

 **Average Bed Occupancy:** 60.47% overall; department-level average is 60.68%.

 **Average Stay Duration:** 7.86 days across all patients.

 **Department Load:** Cardiology (411), Orthopedics (409), Neurology (406), Pediatrics (404), and General Medicine (370).

Emergency & Surgery (Cardio/Ortho) show longest stays and highest occupancy.

## Forecast Highlights:

 **Forecasted Admissions (Next 6 Months):** 4,894.63 patients.

 **Forecasted Occupancy (Next Period):** 4.19K (aggregated occupancy index).

 **Growth Trend:** Admissions predicted to rise steadily through 2024–2025, with peaks around ~5.6K forecasted admissions.

 **Model Accuracy:** Prophet forecasts closely aligned with actuals, outperforming ARIMA in error metrics.

## Recommendations:

 **Resource Allocation:** Prioritize staff & beds in Cardiology, Orthopedics, and Emergency, as they show highest demand and longest stays (~7.8–7.9 days).

 **Elderly Care:** Plan for longer stays in Senior patients (avg 7.9 days), which strain bed availability more than children (avg 7.8 days).

 **Proactive Planning:** Prepare for forecasted admissions surge (~5.6K patients) by expanding temporary bed capacity and adjusting staff rosters.
